Conference Call Key Highlights

- **Products & Platforms business** is seeing good traction in new licenses and renewals. Seeing excellent growth in products such as Commerce, Digital Experience, Unica and Bigfix. Spillage from last quarter stood at \$20 Mn dollars. Excluding that also growth was robust during the quarter primarily led by new wins.
- **IT & Business Services:** Cloud migration and modernization is driving growth. Trends such as front office transformation, especially in industries which were sticky to adopt technology, are playing out
- **ER&D Services:** Good momentum in ER&D due to Industry 4.0, Semicon, IoT and telecom industry.
- Growth was broad-based across services, industries and verticals
- On target to hire 20,000 freshers in this fiscal and will continue fresher hiring in FY23
- **Attrition at 19% LTM.** Heightened levels will continue for some more time before moderates

Margin walk

- **Services margin** dropped 190 bps from 18.9% to 17% and was impacted by 80 bps due to 2nd phase of salary increments, another -65 bps due to seasonal leaves (which will reverse next quarter), -40 bps due to new customer ramp ups which resulted in knowledge transfer costs and some other investments, -85 bps due to retention and attrition costs such as backfilling and bonuses and higher recruitment costs. This was offset by +60 bps from operating leverage from SG&A and D&A and +20 bps from favorable currency movements.
- **P&P EBIT margins** stood at 32% during the quarter (versus in Q2FY22) and served to offset drop in Services margins with a +173 bps benefit on consolidated level margins.

- **Announced acquisition of Starschema** - a Hungarian company - for \$42.5 Mn. The company specializes in the data engineering space and will aid HCL Tech in the Mode 2 services as well as accelerate Eastern European or near shore presence.
- Management indicated that generally, the company can absorb wage hikes in 1 or 2 quarters but this supply crunch has lengthened the process. Margin levers: Company is approaching customers to hike rates in certain T&M projects + fresher intake should aid margins in the future and new geographies will start yielding better results in the next fiscal. But will take some time before margins bounce-back because the growth phase in the industry coupled with supply side constraints are restricting it.

Outlook:

- **P&P:** Q4 is a seasonally weak quarter. Maintain 0-1% growth in FY22e. FY22 was the year of investments in Sales teams which coupled composition of mature products going down should bode well for P&P in the subsequent quarters. However, expect growth in P&P to be volatile as 50% of the license sales happen in the last week of the quarter (as per historical data) - which is the nature of the business
- **ER&D:** Will play significant role in medium term growth
- **IT & Business Services:** Positive on growth momentum in Services side in Q4 as well
- **EBIT Margins:** Except for seasonal impact of 65 bps, no other costs will reverse in Q4FY22 and therefore, one can EBIT margins to be at the lower end of the band. Management mentioned that one downside risk to margins is that if there is demand on the table, company might invest in talent to drive growth and given the supply crunch, this may lead to EBIT margins to dip lower by 10 to 20 bps than the 19% mark
- Going ahead, **expect conversion of deal wins to be relatively faster than before as mix of smaller deals and Cloud and Digital deals are higher versus IMS deals** (which typically take longer time to realize)
- Pipeline is strong and management is seeing allot of rate card deals that are coming in. These deals do not get quantified until delivered

Strong revenue growth performance was led by bounce-back in P&P segment and robust execution in ER&D services.

IT Services growth momentum continued with a 4.7% QoQ growth

Although guidance of EBIT margin was maintained at 19-21%, management indicated that Q4 margins maybe impacted by 10-20 bps in case the vibrant demand environment commands investment in talent for growth

Valuation & Outlook

HCL Tech is currently trading at 23.3x / 20.8x FY23e / FY24e EPS.

Q3FY22 performance was broad-based and healthy and a much-needed bounce-back as HCL Tech was trailing peers given the current vibrant demand environment.

At a 7.6% QoQ growth in cc terms, HCL Tech has so far led the Indian IT Tier 1 services peers in terms of growth. Margins were weaker than our estimates with pressure continuing into Q4FY22, however, that is an industry-wide phenomenon given the supply crunch going on in the tech sector.

Management has given a healthy outlook in terms of pipeline and segments. We particularly take note of management's point of faster realization of orderbook due to better mix

Taking all the above factors in consideration, we upgrade our rating from SELL to BUY and our multiple from 20x to 23x FY24e EPS to arrive at a revised target price of INR 1,481 (INR 1,078 earlier).
